## **PREFACE**

The Australian and New Zealand Standard Commodity Classification (ANZSCC) has been produced by the Australian Bureau of Statistics and Statistics New Zealand for use in the collection and publication of statistics in both countries. This follows other joint developments in Statistical standards such as the Australian New Zealand Standard Industrial Classification (ANZSIC)<sup>1</sup>.

It replaces the Australian Standard Commodity Classification (Revised) - Transportable Goods (ASCC)<sup>2</sup>. The development of the ANZSCC resulted from the need to update classifications to include new commodities and improve comparability of commodity statistics within and between Australia and New Zealand. International comparability has been enhanced by aligning the ANZSCC with the Central Product Classification (CPC)<sup>3</sup>, wherever possible.

Where appropriate, concordances have also been developed with existing classifications such as the ASCC and commodity classifications used in Australian agriculture, manufacturing and mining collections.

In this rapidly changing world, it is important that commodity classifications remain up-to-date. The manual has been produced in loose-leaf form so that it can be easily updated with the development of new commodities, changes to international commodity classifications and the ANZSIC.

The assistance provided by many individuals and organisations during the development of the classification is gratefully acknowledged.

# AUSTRALIAN AND NEW ZEALAND STANDARD COMMODITY CLASSIFICATION

## Introduction

1. The Australian and New Zealand Standard Commodity Classification (ANZSCC) has been developed for use in Australia and New Zealand for the collection and presentation of commodity statistics. It replaces the Australian Standard Commodity Classification (Revised) - Transportable Goods (ASCC)<sup>1</sup> which has been in use, in various forms, for many years.
2. The ANZSCC is one of a number of standards used by the Australian Bureau of Statistics (ABS) and Statistics New Zealand (SNZ) in the collection and presentation of statistics. Whereas the Australian and New Zealand Standard Industrial Classification (ANZSIC)<sup>2</sup> classifies businesses to industries according to their predominant activity, the ANZSCC classifies goods and services (i.e. commodities) which are the outputs of industries.
3. There has been extensive consultation to ensure that the ANZSCC reflects the structure of Australian and New Zealand production and user requirements for statistics. The Australian Bureau of Statistics and Statistics New Zealand encourage other organisations to use the classification in their own work in order to improve the comparability and usefulness of statistics.
4. The ANZSCC presents the commodities used in the collection and publication of ABS and SNZ statistics for the agriculture, forestry, fishing, hunting and trapping, mining, manufacturing, building, construction, retail, wholesale and service industries as at 1993-94.
5. In the development of the ANZSCC, emphasis has been placed on alignment with the international standards. The Central Product Classification (CPC)<sup>3</sup> provides the basis of the classification and links are provided to other international standard classifications. This will aid the comparability of commodity statistics both nationally and internationally.

6. The ANZSCC follows the CPC to its lowest level of detail consistent with Australian and New Zealand requirements. At a minimum, the ANZSCC aligns with CPC categories at the Group (3 digit) level. The structure of the classification and determination of categories are discussed below.

7. All ANZSCC commodities are linked to the appropriate categories of the ANZSIC, the CPC, the Standard Industrial Trade Classification (SITC) Revision 3<sup>1</sup> and the Harmonized System (HS)<sup>2</sup>. As any of these classifications are updated, so will the ANZSCC links be updated.

8. The ANZSCC is to be implemented progressively in statistical series published by the two agencies. In Australia, statistics on the ANZSCC basis will be produced beginning with the Manufacturing Census conducted in respect of 1993-94. The commodity items of other collections have, where possible, been coded to the ANZSCC for use in future collections. In New Zealand, collections such as Building Consents and Completions, the Interindustry Study and the Manufacturing Census are being oriented and concorded to the ANZSCC.

9. Both statistical agencies are ready to assist users to interpret and use the classification for their own purposes. Assistance can take a variety of forms, from general advice through to the provision of Computer Assisted Coding (CAC) systems. Users are encouraged to discuss their requirements with either agency.

10. It is not intended that the ANZSCC will remain static at its detailed level. New categories will be added as needs arise. This will result from both the reassessment of requirements of existing statistical collections and the establishment of new statistical collections. The ANZSCC is presented in loose-leaf form which can be updated. It will be revised at least annually, and reproduced in full as required.

### **Cooperation between Australia and New Zealand**

11. A succession of economic agreements between Australia and New Zealand have operated since 1922. The most recent of these (the Australia - New Zealand Closer Economic Relations Trade Agreement [CER]) became effective from 1 January 1983.

12. For many years Australian and New Zealand statistical agencies have collaborated with a view to sharing experiences and exploring common interests. Joint working arrangements have been set up to harmonise statistics wherever possible and practicable.

13. The possibility of the two countries developing and using a common commodity classification was raised in 1992. The statistical agencies use similar principles to create their national classifications and have already produced a common industrial classification - the ANZSIC. They were therefore able to agree on the principles and strategy for development of a single commodity classification that met both countries' requirements.

### **International developments**

14. The United Nations and other international organisations, in association with the customs and statistical agencies of major trading nations, have developed an interrelated set of classifications of economic activities and commodities. These comprise the International Standard Industrial Classification of all Economic Activities (ISIC) Revision 3<sup>1</sup>, the HS, the SITC Revision 3 and the CPC. As part of the world programme of harmonisation the ABS, SNZ and other major national statistical agencies are progressively rebasing their classification systems to align with these international standards as closely as possible, thereby facilitating international data comparisons.

15. For goods typically subject to international trade, and consequently to customs administration, the HS is now, under international convention, the standard which describes and defines them.

16. As signatory countries to the HS Convention, Australia and New Zealand, and hence the ABS and SNZ, have a mandatory responsibility to collect and publish import and export commodity statistics according to the most detailed (six-digit) level of the HS without deviation. The consistency introduced to international trade statistics is reflected in the 5019 HS 6-digit commodity codes and descriptors which are identical for both import and export statistics and are stable over time<sup>2</sup>. These are a minimum list of items. Australian trade statistics are available at finer levels of detail presented in the Combined Australian Customs Tariff and Statistical Nomenclature (Customs Tariff)<sup>3</sup> and The Australian Harmonized Export Commodity Classification (AHECC)<sup>4</sup>. Trade data in New Zealand is classified by the New Zealand Harmonised System (NZHS)<sup>5</sup> which applies to both imports and exports as a single 10 digit classification.

17. The Standard International Trade Classification Revision 3 (SITC)<sup>6</sup> regroups HS categories into 3118 headings. It is designed to aid statistical analysis of trade data and to assist in the compilation comparable trade data.

18. The CPC has been developed as a multipurpose classification covering *all*

*goods and services* (the HS and SITC classify goods only). It has been designed to bring together, into a single framework, products (commodities) that can be the object of domestic or international transactions, or that can be entered into stocks. Also included are non-produced assets such as land, and assets arising from legal contracts (e.g. patents, trademarks and copyrights). At its broadest level it can be viewed as being in two major parts - 'Transportable goods' and 'Non-transportable goods and services'.

19. The transportable goods categories of the CPC can be directly linked to the HS and the SITC Revision 3. Consequently, comparison between the data compiled using any of these classifications is possible. As all the SITC and the CPC transportable goods categories are composed of one or more HS categories, the Explanatory Notes to the HS also provide the documentation for the definition of the scope of individual SITC and CPC categories.

20. The non-transportable goods and services component of the CPC is the focus of current international work concerning standard non-transportable goods and services categories. The CPC includes explanatory notes which define the scope of these categories.

### **Purpose and scope of the ANZSCC**

21. The purpose of the ANZSCC is to enable the compilation, publication and use of commodity statistics by governments and private organisations in applications such as the analysis of market shares; analysis of the relationship between employment, industrial structure and tariff provisions; studies of import competition and replacement; submissions to the Industry Commission; the compilation of input-output tables; the conduct of trade and tariff negotiations and the integration of most commodity data.

22. The ANZSCC provides a framework for the grouping of all the goods and services produced in the Australian and New Zealand economies. In so doing, it aids the:

- \* comparability between production, import and export statistics
- \* links between commodities and industries, and
- \* comparability between Australian, New Zealand and international statistics.

23. Like the CPC, the ANZSCC formally presents commodity categories for transportable goods and non-transportable goods and services within a complete classification. It presents both current ABS and SNZ collection items and provides the basis for definition of future collection items. This approach is aimed at ensuring that the classification will accommodate future statistical requirements as well as those identified at the time of the original release of the classification.

24. The links to the underlying international standard commodity classifications (the CPC, the HS and the SITC) are provided to aid both the determination of the scope of individual categories (via the explanatory notes to the HS and the CPC) and the level to which individual ANZSCC categories can be related to individual categories of those classifications.

25. The links to the ANZSIC are provided to indicate the primary industry of origin of the goods and services included in the classification.

### **Structure and layout of the classification**

26. The ANZSCC follows the structure of the CPC to its Group (three-digit) level, with only three exceptions<sup>1</sup>. All exceptions are either aggregations or disaggregations of CPC Groups, and result from important user requirements or local data supply problems.

---

#### **Footnote**

- 1 ANZSCC 328 '*Newspapers, journals and periodicals*' was created, consisting of CPCs 323 '*Newspapers, journals and periodicals, appearing at least four times a week*' and 324 '*Newspapers, journals and periodicals, appearing less than four times a week*';

ANZSCC 297 '*Footwear, with outer soles and uppers of rubber or plastics, or with uppers of leather or textile materials (including protective, sport and miscellaneous special footwear) (excluding skating boots, asbestos and orthopaedic footwear)*'; *Parts of footwear*' was created, consisting of CPCs 293 '*Footwear, with outer soles and uppers of rubber or plastics, or with uppers of leather or textile materials, other than sports footwear, footwear incorporating a protective metal toe-cap and miscellaneous special footwear*', 294 '*Sports footwear, except skating boots*', 295 '*Other footwear, except asbestos footwear, orthopaedic footwear and skating boots*' and 296 '*Parts for footwear: removable in-soles, heel cushions and similar articles; gaiters, leggings and similar articles, and parts thereof*';

CPC 531 '*Agricultural land, forest and other wooded land*' was split to create ANZSCC's 534 '*Agricultural land*' and 535 '*Forest and other wooded land*'.

27. The layout of the classification is explained with reference to the following two examples from the body of the manual. The first relates to services commodities and the second to goods commodities.

### Example 1: Services

28. The first three levels of the classification represent (in bold text) the Section, Division and Group level of the CPC. Further levels of the classification (plain text) represent the local Australian and New Zealand levels of the classification. These levels may or may not equate to CPC Classes or subclasses and are generally referred to as items.

29. In the 'Non-Transportable Goods' and 'Services' parts of the ANZSCC (Sections 5 to 9) the CPC field indicates the links to the detailed (5 digit) level of the CPC. These links are provided to aid the definition of the scope of individual ANZSCC items via the CPC explanatory notes described in paragraph 20 above.

30. The ANZSIC code represents what is known as the "industry of origin" for the commodity concerned. A commodity is usually an output of a single industrial activity which is designated as the industry of origin for that commodity. It is possible, however, for a given commodity to be produced by more than one industrial activity. When this is the case, all industries of origin are indicated under the ANZSIC heading where they are significant, or a higher level of ANZSIC may be specified if there is a lack of information at the four digit level. An example is ANZSCC item 391.13 "Brewing or distilling dregs or waste". There are at least two significant industries of origin for this commodity, "Beer and malt manufacturing" (ANZSIC 2182) and "Spirit manufacturing" (ANZSIC 2184). The product is the same regardless of the industry of origin. The allocated industry of origin is identified at the ANZSIC Group level (i.e. 218 Beverage and malt manufacturing) as this level is broad enough to encompass all the activities involved in the production of the commodity. In the ANZSCC this level of ANZSIC is represented as 2180.

31. An edition of the ANZSCC with categories ordered according to industry of origin is planned. This version will necessitate "free standing" (hierarchy independent) category descriptors and is expected to be published later in 1996.

32. The UQ field refers to the 'Units of Quantity' by which data other than dollar values are collected. These mostly relate to transportable goods, but there are a few cases where they apply to non-transportable goods. The UQs are detailed, with other abbreviations used in the ANZSCC, at page xvii.

33. For transportable goods (Sections 0 to 4 of the ANZSCC), the SITC and HS codes are provided on the right side of each page. In addition to defining the scope of the ANZSCC items, they also indicate the links required for the compilation of comparable import, export, and production statistics. All import and export data are collected and published on an HS basis, and some are published on a SITC basis. The level of direct comparability varies from item to item, but in many cases it may be possible to construct more detailed comparisons by reference to the most detailed items of the import and export classifications.

34. There are three different sets of codes shown in the Old Code field in the transportable goods section of this classification. Items previously collected in ABS manufacturing censuses or surveys are displayed with a 5-digit code in the form 'nnn.nn'. Items collected in agricultural censuses and surveys are displayed with a 7-digit code in the form 'nn.nnn.nn'. or 'Supp' (supplementary). Items collected by the ABS in relation to mineral production are displayed with a 3-digit code in the form 'nnn'. In all cases the codes shown are, or were, those used in the respective statistical collections to identify the commodities concerned, and should be quoted in all

references to data compiled prior to the implementation of the ANZSCC in these collections.

### **Determination of individual commodity items**

35. The most detailed categories of the ANZSCC (five, seven or nine digit) are determined by a combination of factors. User requirements are a prime factor, but any proposal for a commodity is subject to the requirement that the commodity align with, at least, the Group (3 digit) level of the CPC. This is the minimum requirement. Where possible, items should align with the CPC at the most detailed level.

36. This is less easy to achieve in those areas of the economy which have been subject to commodity statistical collections for many years, since their existing commodities have been defined largely outside the emerging international standards. However, the opportunity will be taken, as these collections are revised, to examine the appropriateness of the existing commodity definitions. For those areas of the economy where statistical collections seeking commodity information are relatively recent (e.g. service industries), compatibility with the CPC to the most detailed level will be sought. This will not preclude commodities being defined which are more detailed than the most detailed level of the CPC.

37. Apart from these considerations, other factors also play a part in the decision whether or not to include a potential commodity in the classification. These relate to data availability, collection cost (to data providers and the ABS) and confidentiality.

### **Concordances with other classifications**

38. Concordances between different classifications identify the relationship between respective categories. An item in one classification can be equivalent to one or more whole or part items in another classification. A concordance may therefore serve as an index to assist in locating individual categories in related classifications.

39. This publication includes tables of concordances between ANZSCC items and related items of the ANZSIC, HS, SITC and CPC. In particular, a concordance linking ANZSIC industries of origin to ANZSCC items is included to assist those wishing to analyse the commodity coverage of ANZSIC industries.

40. However, care needs to be taken in relating commodity statistics to their industry of origin. ABS industry statistics are based upon information from businesses which are classified to their main industrial activity. This means that any secondary industrial activity by a business will be accounted for under its primary industry classification. Therefore, commodity aggregates calculated on an industry of origin basis will not necessarily be compatible with official industry statistics. This concept is explained further in the introduction to the ANZSIC<sup>1</sup>.

---

**Footnote**

1 ABS Catalogue No. 1292.0; SNZ Catalogue No. 19.005.0092

41. A concordance linking ANZSCC items to ASCC items is also included to assist in comparing commodity statistics over time. Concordances to New Zealand production items will become available as surveys utilising ANZSCC categories are developed.

42. A concordance does not necessarily enable exact comparability between data compiled according to different classification schemes. The main difficulty in using concordances is in knowing how to treat part relationships. This usually involves determining the scope of the categories under consideration in both classifications and determining which components of the categories are shared in common. For example, some ANZSCC items are the direct equivalent of HS items, while many are either combinations of HS items or dissections of HS items. To establish the level at which comparisons can be made, where the relationship is other than one to one, it is necessary to aggregate the HS components of multiple ANZSCC items to the point where they can be grouped together for comparison with equivalent groups of import or export items.

### **Comparison of production and trade statistics.**

43. While it was noted earlier that the CPC basis of the ANZSCC enables improved comparability between production, import and export statistics, there are a number of factors for which allowance needs to be made when making comparisons. These include:

- . the compatibility of the commodity categories at the detailed levels, discussed above,
- . the units of quantity applicable to each series,
- . the basis of valuation of the commodities concerned,
- . timing in the recording of import and export movements, and in interpreting build up or run down of stocks by producers or merchants,
- . the scope and coverage of collections; for example, the production of manufactured goods by business units whose primary industrial activity is predominantly non-manufacturing, is not covered by ABS Manufacturing Production statistics,
- . differences in quality and material composition, or variations in the import component of goods, which may affect substitutability assumptions, and,
- . changes in the definition of individual commodities over time,

### **ANZSCC products and other classification services**

44. The material provided in this edition of the ANZSCC can be made available on electronic media, subject to normal conditions of sale concerning secondary provision and copyright. It is available on floppy disk for \$30.00 (see ABS catalogue number 1254.0.15.001).

45. A computer-assisted coding (CAC) system for the ANZSCC is also available for IBM compatible PCs. CAC systems are interactive software products designed to speed the process of classification by allowing the user to input an abbreviated keyword, and then choose options to further specify the subject until it can be uniquely identified and allocated the appropriate classification category.

46. The ABS and SNZ will, on request, provide determinations or advice on the classification of goods and services to the ANZSCC or to related classifications.
